

NHE Prep Quiz #10

Wildlife Wonders

Look for the answer beneath Quiz #11

Quiz #9 Answer:

Answer: Moderately well drained.

Explanation: We see redox features (red/orange rusty looking coloring in the soil) consistently showing up in the profile starting at 50cm which makes the soil well drained because the seasonal high water table can be expected to be seen between 45 and 92cm.

See Drainage Class categories on the [resources page](#) for more help with this question.
